ALS SOLUTIONS
WEBTRIEVE™

right solutions.
right partner.

WebTrieve™ provides clients with the facilities to register their samples for analysis to the laboratory and track their progress from submission to registration to interim result and final certificate approval.

Sample and test data can be searched, trended and reports generated bespoke by client.

Sample Registration

Register and submit work orders directly to the laboratory with labels and reports available to ensure full traceability throughout the process.

Templates for samples, work orders and shelf-life protocols standardise submissions and allow an efficient means to register samples for analysis.

Results

View both interim and final test results within minutes of approval from the laboratory, colour coded based on specifications supplied by the client.

Multiple views available to users which are filterable by any information entered during sample registration.

Reports

Generate Excel downloads from several templates available including data summaries and graphs.

Report options include Nutritional Average calculations from results reported from the laboratory (with the additional option to add Nutritional specifications against the results) as well as shelf life reporting.

Create bespoke report templates which can be saved to be re-run on an ad-hoc basis or scheduled for WebTrieve™ to generate at a specified frequency such as daily, weekly, or monthly.

Notifications

Notifications can be set by user preference for out of specification alerts or scheduled report generation.
